DETAILED ACTION

Specification

1. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: Support for “an adjuster” (found in the last sections of Claims 20, 44, and 50) is not found in the originally filed specification. As best understood the “adjuster” is either element 30, disclosed to be an adjustment arm, or element 31, disclosed to be a “pin”.

Claim Objections

2. Claim 30 is objected to because of the following informalities: Claim 30 improperly depends from itself; Claim 30 should be changed to – The truck assembly of Claim 29 – .

Additionally claim 43 depends from claim 44, is this correct? Or should claim 43 depend from a preceding claim? The claim is correct as written; the examiner raises this point for applicant's attention, as all other claims depend from preceding claims.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 29-42 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 29 recites the limitation "the support boss" in line 15 of the claim. There is insufficient antecedent basis for this limitation in the claim.

Allowable Subject Matter

4. Claims 29-42 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to correct the Objections to the Claims and Specification.

5. Claims 43-52 allowed.

The following is a statement of reasons for the indication of allowable subject matter: The primary reason for the indication of allowable subject matter in this case is the inclusion of: a pin for adjusting the rotational position of a boss for a truck for a skateboard where the boss is housed in a mount to allow for pivotal movement of an axle for the truck of the skateboard, in combination with the other elements recited, not found in the prior art of record.
